PROFESSIONAL SUMMARY

Motivated AI/Data Science professional with expertise in Generative AI (RAG, LLMs), machine learning, and scalable data solutions. Skilled in building end-to-end GenAI systems using LLMs, RAG architecture, and modern tools like Haystack, LangChain, LlamaIndex, and various vector databases. Hands-on with vector stores such as FAISS, Pinecone, Weaviate, AstraDB, and Neo4j. Extensive experience with LLMs including OpenAI GPT, Hugging Face models, Gemini, and Mistral. Proficient in deploying and scaling GenAI solutions using Docker, Azure, and AWS.

TECHNICAL SKILLS

Languages: Python, JavaScript, CSS, SQL, HTML

ML & DL: Numpy, Pandas, Scikit-Learn, TensorFlow, Pytorch, OpenCV

GenAI & NLP: HuggingFace, Gemini, OpenAI, LangChain, LlamaIndex, Haystack, RAG

Cloud & Web: AWS EC2, Azure (Databricks, DataFactory), Flask, Streamlit, FastAPI

Databases: PostgreSQL, MongoDB, Snowflake, AstraDB, Neo4j, Pinecone, Weaviate, FAISS

Tools: Git, GitHub, Kafka

EXPERIENCE

Data Scientist | 2Cloud, Wayanad

Sep 2025 – Present

- Leading a data science team to drive AI innovation and delivery.
- Developing and deploying Generative AI applications for business use cases.
- Designing and implementing workflow automation to optimize efficiency.
- Building and presenting proof-of-concepts (POCs) for scalable AI-driven solutions.
- Collaborating with cross-functional teams to integrate AI solutions into existing business systems.

Software Developer | Mezab Air Conditioning, Doha, Qatar

May 2024 – Jun 2025

- Developed ERP web app with HTML, CSS, JS, and PostgreSQL.
- Implemented dynamic quotation management and real-time CRUD interfaces.
- Integrated frontend with backend PostgreSQL for seamless data handling.

Data Science Engineer | Jidoka Technologies, Chennai, India

Jun 2022 – Feb 2024

- Built AI-based vision inspection models with Python and OpenCV.
- Deployed DL models at customer sites and supported production testing.
- Handled end-to-end pipelines from image labeling (CVAT) to implementation.

GEN AI & DATA SCIENCE PROJECTS

E-Commerce Chatbot with RAG & Gemini AI

- Developed an end-to-end chatbot for answering e-commerce product queries by analyzing customer reviews.
- Implemented a Retrieval-Augmented Generation (RAG) architecture using Google's Gemini model and LangChain for context-aware response generation.
- Integrated Astra DB vector store for efficient semantic search and retrieval of relevant review data.
- Built a Flask-based web interface allowing users to ask product-related questions and receive AI-generated responses.
- Enhanced user experience by providing accurate, review-based insights instead of generic answers.

Supply Chain Demand Forecasting Tool

- Developed an end-to-end ML pipeline using DVC for reproducibility, version control, and streamlined workflow orchestration.
- Implemented a modular design (components, config management) for maintainability and easy integration of new forecasting models.
- Ensured data reliability via automated validation and simplified deployment using Docker for consistent environments.
- Built an interactive Streamlit UI for intuitive user interaction with forecasts and model insights.

End-to-End QA System with Haystack & FastAPI

- Built a FastAPI-based question-answering system using Haystack, featuring preconfigured pipelines for embeddings, retrieval, and response generation.
- Integrated Pinecone vector database for efficient document storage/retrieval and PDF processing for automated text ingestion and embedding.
- Designed a user-friendly web interface to streamline query interactions and display answers.
- Developed a modular, extensible architecture for easy customization of components (models, retrievers, databases).

EDUCATION

- M.Tech - Mechatronics | Vellore Institute of Technology | 2018–2020
- B.E. - Automobile Engineering | Anna University | 2012–2016
